Appendix C: Building Heights & Setbacks Analysis
1. New Directions for the Yarra River

The Victorian Government has established a program of activity aimed at protecting the long term interests of the Yarra River. Commencement of the program was announced in August 2015 by the Minister for Planning.

The program is focused on establishing a dedicated Yarra River Trust and managing development impacts in the short term through implementing stronger planning policy and planning controls for areas along the Yarra River under immediate pressure from development.

Establishing the Yarra River Trust

The Victorian Government is committed to protecting Melbourne’s iconic Yarra River from inappropriate development and promoting its amenity and significance by establishing a dedicated Trust.

In December 2015 the Minister for Planning and the then Minister for Environment, Climate Change and Water appointed the Yarra River Protection Ministerial Advisory Committee (Yarra MAC) to provide independent advice to Government on the key issues and opportunities for the river as well as improvements to the governance arrangements.

The Yarra MAC released a Discussion Paper in June 2016 to promote debate about how the Yarra River should be managed and protected in the future. It outlined a number of key issues facing the future of the Yarra River and options for a new management model to protect its values.

The Yarra MAC will deliver its final Recommendations Report to both Ministers in the last quarter of 2016. For further information please visit: www.delwp.vic.gov.au/yarra-river-protection.

Implementing Stronger Policy and Planning Controls

The Victorian Government recognises the need to respond to development pressures in the short to medium term until a Trust is formed. To support effective decision making while new governance and policy arrangements are being finalised. The Minister for Planning has approved a program that focuses on strengthening existing planning policy and controls for the Yarra River.

A range of studies (including this study) implement their recommendations via a suite of consistent planning controls within the Yarra River corridor. The focus of the program is the area between Richmond and Warrandyte, which is the stretch of river under the greatest pressure from urban development. This portion of the river passes through or adjoins the municipalities of Yarra, Stonnington, Boroondara, Banyule, Manningham and Nillumbik.

Strengthening State Planning Policy

On 12 August 2015, the Minister for Planning hosted a roundtable forum with council mayors and the heads of Melbourne Water, Parks Victoria and the Port Philip Catchment Management Authority, to outline the actions the Victorian Government proposes to strengthen existing planning policy and controls for the Yarra River.

Councils and authorities were invited to collaborate with the Department of Environment, Land, Water and Planning in developing more effective and consistent planning controls for the Yarra River between Richmond and Warrandyte.

On 17 September 2015, the Department of Environment, Land, Water and Planning hosted a workshop involving senior planning practitioners from all relevant councils, Melbourne Water, Parks Victoria and the Port Philip Catchment Management Authority to discuss the components of a strengthened State planning policy, and to discuss the potential form and content of model planning controls. The feedback received through this workshop was used to inform the development of a strengthened State planning policy and input into the preparation of model planning controls.

On 21 December 2015, Amendment VC121 was gazetted giving effect to a strengthened ‘River Corridor’ policy and a new ‘Yarra River Protection’ policy within Clause 12 of the State Planning Policy Framework. The new ‘Yarra River Protection’ policy provides a strengthened basis and rationale for the protection of the whole of the Yarra River corridor under the planning system.

Preparing Consistent Planning Controls: Richmond to Warrandyte

The Department of Environment, Land, Water and Planning has worked in partnership with councils and Melbourne Water to finalise a number of strategic projects between Richmond and Warrandyte. The following actions will form the basis of a planning scheme amendment to implement strengthened planning controls.

- Finalise the Middle Yarra River Study recommendations and complete associated municipal toolkits for Banyule, Manningham and Nillumbik councils;
- Review planning controls implemented in the City of Boroondara under VC96 and strengthen those controls with appropriate setback distances;
- Review the strategic findings of the City of Yarra’s Yarra River Strategy; and
- Review planning controls for areas adjacent to the Yarra River within the City of Stonnington.
2. Project Background

This Toolkit

This Municipal Toolkit sets out recommendations implementing the findings and outcomes of the Middle Yarra River Corridor Study Recommendations Report, December 2015 (the Recommendations Report).

These recommendations are based on a detailed assessment of the landscape values and character of the river corridor, the identification of potential development pressures for the Yarra River, and analysis of how the current suite of statutory provisions works to manage these threats, as detailed in the Recommendations Report.

The recommendations in this report aim to strengthen the current provisions of the Banyule Planning Scheme, to ensure that the sensitive environment of the Yarra River corridor is protected and managed, now and into the future.

Implementation Approach

As set out in Chapter 1 of the Recommendations Report, the approach be summarised as:

- Understanding the values, character and views of the river and identifying the threats and pressures to these
- Examining the current approach to managing development and protecting vegetation in the study area through the planning scheme, in order to determine the gaps in statutory controls
- Recommending ways in which these controls could be strengthened to protect the identified values, character and views.

Recommended areas of Management

Chapters 5 & 6 of the Recommendations Report identify the areas recommended for management through the Banyule Planning Scheme.

These recommendations focus on managing private land, where development has the greatest impact upon the river’s immediate and broader landscape setting, defined in Chapter 5 as:

- The Waterway Corridor - the river’s immediate environment
- The River Experience Corridor – the experience of the river from its banks and trails
- The Landscape Setting - the wider landscape setting beyond.

The areas recommended for management within the Banyule City Council are shown on the map on page 7, River Interface Character Types & Key Views.

Recommended Changes

The Banyule Planning Scheme has a number of well defined and applied planning controls that seek to protect the Yarra River from inappropriate development. This includes the Environmental Significance Overlay, Significant Landscape Overlay and the recent application of the Neighbourhood Residential Zone to areas within the broader Yarra River corridor.

This study has identified the need to apply stronger siting and design controls through the Banyule Planning Scheme for prominent areas within close proximity to the Yarra River, where future development has the potential to negatively impact on its value and significance.

This study recommends the following for the Banyule Planning Scheme:

- Council to consider updating the Municipal Strategic Statement (MSS) to include content and outcomes outlined in this study as part of a future review of the Local Planning Policy Framework.
- Apply a new Design and Development Overlay (DDO) to areas of private land that are adjacent to, or within close proximity to the Yarra River, establishing area specific height, setback and other siting and design requirements.
- Combine SLO1 ‘Watercourse Environs’ and SLO2 Yarra Valley Landscape Area’ into a single SLO control that takes in the confluence areas of the Darebin Creek and the Plenty River. The spatial application of the SLO should be extended to cover all land toward the Yarra River.
- Consider a master plan approach to managing major development sites and development on public land, using the Incorporated Plan Overlay (IPO) or the Development Plan Overlay (DPO), as a potential planning tool to guide the use and development of land.
3. The Middle Yarra River Corridor in Banyule

River Corridor Values
The Yarra River is a major landscape feature of significance to metropolitan Melbourne. These values are documented in detail in Chapter 2 of the Recommendations Report.
Within the local context of the Banyule City Council, the river is specifically valued for:
- Its rich natural environment which includes some of the most valuable flora, fauna, geological and geomorphological assets in metropolitan Melbourne.
- The role it plays as a key biodiversity corridor through the municipality.
- The topographical formation of the Yarra River valley as it winds through the municipality, with land dropping down to the river corridor from the City’s distinctive ridgelines.
- Its dense vegetation cover underpinning the landscape character of surrounding residential and rural areas.
- The variety of landscapes as it transitions from the suburban settings of Ivanhoe, Heidelberg and Viewbank to the rural settings around Lower Plenty and surrounding conservation areas.
- The network of parklands and conservation areas along the river corridor, including the Banyule Flats, Warringal Parklands and formal recreation spaces, which are linked by the Main Yarra Trail.
- Its recreational value for the local community in providing the experience of a natural bush setting within the city.
- Its pivotal role in the pre- and post-contact history of the municipality, as a place of Aboriginal cultural heritage significance and as a key factor in shaping the settlement of the region.

The Yarra River Character within Banyule
The character of the entire Middle Yarra River corridor is documented in detail in Chapter 3 of the Recommendations Report. Five different river character types have been identified within the Banyule City Council, shown on the map opposite, River Interface Character Types & Key Views.

Ivanhoe, Heidelberg and Viewbank - Leafy Suburban
The established residential neighbourhoods of Ivanhoe, Heidelberg and Viewbank are included within the Leafy Suburban Character Type. While these neighbourhoods are of a typical residential density for inner-middle Melbourne suburbs, they have a distinctively well-treed character, which complements the landscape character of the river corridor.
Most of the Leafy Suburban Character Type areas are located away from the river’s edge, beyond the buffer of open parklands that surround the river. In these areas, the distant visibility of buildings and roads from the river corridor is an important consideration. It is also vital that a strong tree canopy is retained as a backdrop to the river corridor.
In many locations, buildings form the edge to the parklands and conservation areas of the river corridor. There are also several streets in Ivanhoe, Heidelberg and Rosanna which lie in close proximity to the river. The siting and design of new buildings and retention of the tree canopy is of particular importance at this interface with the river and its surrounding conservation areas.
Existing requirements for building siting and design within the Leafy Suburban areas have assisted in the retention of the highly vegetated character. This includes low site coverages allowing space for new planting, retention of existing trees and a building height of one to two storeys sitting below the predominant tree canopy.

Lower Plenty - Rural Environment
Parts of Lower Plenty, directly adjacent to the river corridor or its surrounding conservation areas, are included in the Rural Environment Character Type. These areas comprise large lot rural residential properties within a spacious setting and a bucolic, native landscape environment. There is a mix of dwelling styles, some of which sit discreetly within the landscape and others which are more visually dominant. There are also areas of cleared pastoral land, differently types of rural structures and occasional horse stables.
For lots adjoining the river, the siting and design of new buildings, retention of the tree canopy and protection of the riverbank environment are of particular importance. On other sites located further away from the river or at the interface with conservation areas, the distant visibility of buildings and roads from the river corridor and its surrounding conservation areas, and the retention of the tree canopy backdrop, are important considerations.

Riverside Parklands and Recreation
The many formalised open spaces and recreation reserves that lie on the flat land of the river’s floodplain, and follow the river corridor within its broader suburban setting, are included within the Parklands and Recreation Character Type. These spaces include the Latrobe, Ivanhoe and Rosanna golf courses, Heidelberg Park and Warringal Parklands. The Main Yarra Trail provides access to these linked open spaces. These areas are well-vegetated with mature trees, with either a formally planted or naturalistic character.
While not subject to pressure for new development, the siting design of parkland and recreational infrastructure, particularly at the river’s edge is an important consideration in these areas. This includes fencing, sports facilities and playgrounds, as well as jetties, boat ramps or sheds, and mooring facilities. As highly valued spaces along the river corridor, it is essential that this infrastructure is provided in a sensitive manner.

Riverside Conservation Areas
Large areas of bushland or conservation reserves lie along the river’s edge, including the Banyule Flats and the extensive Yarra Valley Parklands. These areas are all set aside for retention as bushland or wetlands and are included within the Yarra River Conservation Character Type. They are a valuable indication of the river in its most natural setting, providing habitat for the range of flora and fauna along the river’s course, and also provide a heavily landscaped buffer to residential areas beyond.
Within these areas, the siting and design of parkland and recreational infrastructure, particularly at the river’s edge, is also an important consideration, as per the Parklands and Recreation Character Type.

Key Views
There are numerous viewing opportunities within, to or from the river corridor within the Banyule City Council, and these are also documented in Chapter 3 of the Recommendations Report and shown on the map opposite.
In summary, the key views within (or to) the Banyule City Council include:
- Dynamic views of the river that can be obtained from moving along the Main Yarra Trail or traveling by boat.
- Bridge crossings of major roads that provide views of the river for people travelling in cars, pedestrians or cyclists, including bridges at Burke Road, Banksia Street and Fitzsimons Lane.
- The viewing platform at the Yarra and Plenty Rivers’ confluence.
- The rapids observation point at Westerfolds Park.
- Views to the broader river corridor from elevated points in Heidelberg and Lower Plenty.

Middle Yarra River Corridor Study Banyule Municipal Toolkit October 2016

State Planning Policy Framework

On 21 December 2015, Amendment VC121 was gazetted giving effect to a strengthened River Corridors policy and a new ‘Yarra River Protection’ sub-policy within the State Planning Policy Framework. The new policy provides a strengthened basis and rationale for the protection of the whole of the Yarra River corridor.

The new policy includes a ‘Statement of Significance’ for the Yarra River, four key strategic policy principles, and a number of objectives and strategies.

The new River Corridor policy has been moved from its previous location at Clause 11 (Settlements) to Clause 12 (Environment and landscape values), supporting a refocusing of the policy away from development within an urban setting, to one focused on protecting and enhancing its environmental and landscape setting.

The new Yarra River protection policy is found at Clause 12.05 of the SPPF. The following is an extract:

**Yarra River protection**

**Objective**

Maintain and enhance the natural landscape character of the Yarra River corridor in which the topography, waterway, banks and tree canopy are dominant features providing a highly valued, secluded, natural environment for the enjoyment of the public.

**Strategies**

Strengthen the river’s natural environment, heritage and overall health by:

- Protecting the river’s riparian vegetation, natural riverbank topography and flood management capacity.
- Ensuring development does not increase the rate or quantity of stormwater, sediment or other pollutants entering the river.
- Protecting and enhancing both terrestrial and aquatic habitats and their linkages along the river corridor.

Maintain a sense of place and landscape identity by:

- Retaining a dominant and consistent tree canopy along the river corridor and within its broader landscape setting.
- Ensuring that the appearance of development is subordinate to the local landscape setting, with any views of development being filtered through vegetation.
- Planning for the river and its environments as a recreation and tourism resource.
- Ensuring linkages and public access to the river and its parklands are maintained, enhanced and new links created where appropriate.
- Avoiding overshadowing of the river, its banks and adjacent public open space to ensure that the amenity of the public realm is maintained year round.

Ensure that development is designed and sited to maintain and enhance the river’s secluded and natural environment by:

- Minimising the visual intrusion of development when viewed from major roads, bridge crossings, public open space, recreation trails and the river itself.
- Ensuring that the siting and design of buildings avoid contrast with the local natural landscape and environmental character.
- Ensuring building height is below the natural tree canopy and all development is set back a minimum of 30 metres, or greater, from the banks of the river.

This amendment strengthened policy at the State level for the Yarra River, adding to policy at Clause 11.04-7 which identifies the river as a significant asset and Clause 11.03-1 which encourages public accessibility along waterways.

Another key policy in the SPPF that affects built form along the Yarra River is Clause 14.02-1 Catchment planning and works, however no built form standards.

Local Planning Policies & Controls

The local policies and controls of the Banyule Planning Scheme relating to the Yarra River are detailed in Appendix A and zoning and overlay maps in Appendix B. The provisions that are of most relevance to the siting and design of new development within the study area.

**Municipal Strategic Statement (MSS)**

- Clause 21.01 Municipal Profile
- Clause 21.05 Natural Environment

**Local Planning Policies**

- Clause 22.02 Neighbourhood Character
- Clause 22.06 Cultural Heritage Conservation

**Zones**

- Neighbourhood Residential Zone (NRZ), Schedule 3 (8m mandatory height limit, or 9m on sloping sites, maximum of 2 dwellings per lot, permit requirement for dwellings on a lot less than 500m²)
- Residential Growth Zone Schedule 2 (13.5m discretionary height limit, or 14.5m on sloping sites)
- Low Density Residential Zone (0.4ha minimum subdivision area)
- Rural Conservation Zone & Public Conservation and Resource Zone
- Urban Floodway Zone (restricts most development on flood-prone land adjacent to the river)
- Commercial 1 Zone (permit required for most buildings and works, however no built form standards)

**Overlays**

- Environmental Significance Overlays
  - ESO1: Yarra River, Plenty River & Darebin Creek
  - ESO4: Significant Trees & Areas of Vegetation
- Significant Landscape Overlays
  - SLO1: Watercourse Environments
  - SLO2: Yarra Valley Landscape Area

**Reference Documents**

- Banyule City Council Neighbourhood Character Strategy (2012)
- Landscape Assessment for Significant Ridgelines in Banyule (2012)
- Heritage Strategy (2013)
- Aboriginal Heritage Study (1999)
Gaps in Planning Scheme Controls

The current suite of policies and controls in the Banyule Planning Scheme relating to the Yarra River has been reviewed in detail. This analysis has shown where gaps exist in the statutory framework for the protection and management of the river corridor, and where additional controls are required to achieve the recommended outcomes of the study.

Planning Policy Framework

• Council’s Local Planning Policy Framework includes numerous references to the significance of the Yarra River within Banyule, mostly within the Municipal Strategic Statement (MSS).
• The MSS includes specific references to the significance of the Yarra River as a defining feature of the municipality. However, there is limited guidance about managing the impact of development upon the river’s landscape quality.
• There is no local policy specifically designed to address development along the Yarra River corridor. While several Local Policies refer to the significance of the river, these policy statements are general in nature and do not provide direction about the siting and design of development within the river’s setting or protection of the river’s sensitive environment.

Zones

• The various zone controls applying to private land trigger permits for different types of land use or development.
• While the zones include general requirements to respect the character or environment of the area, none of these requirements relate specifically to the protection and management of the Yarra River corridor.
• Substantial areas of NRZ adjoin the river corridor parklands applying an 8m mandatory height control. Other detailed design requirements recommended in this study are not able to be included in this zone schedule.
• The zoning of public land generally provides adequate guidance for development along the river corridor, as it limits development opportunities and defers to other statutory requirements for public land management.

Overlays

• A number of overlay controls apply within the study area and trigger permits for various types of development, each with a specific intent and decision guidelines. However, there are no overlays that implement the level of control recommended by this study, i.e. mandatory building heights and setbacks for sites abutting or in close proximity to the river.
• ESO1: Yarra River, Plenty River & Darebin Creek is in place to protect the riverbanks and riparian vegetation. The control is applied to all sites adjoining the river, both public and private land, and in most instances includes entire property parcels. This ESO provides the level of environmental and tree control envisaged by this study.
• ESO4: Significant Trees & Areas of Vegetation also relates to the protection of vegetation within the river environment. Together with the ESO1 these controls provide a comprehensive management framework for the environmental values of the river, including its banks and the waterway.
• The SLO1: Watercourse Environs relates to the wider river environment, beyond the extent of ES01, to the east of Burke Road and up to the eastern municipal boundary. SLO1 includes an area related to the Yarra River’s confluence with the Darebin Creek.
• SLO2: Yarra Valley Landscape Area also relates to the wider river environment beyond the extent of ES01, to the west of Burke Road. SLO2 includes an area related to the Yarra River’s confluence with the Plenty River and is applied to a broader landscape setting encompassing both riverine landscapes.
• The SLOs implement building design controls that are general in nature, and require consideration of the interface with the public spaces along the river corridor. These controls reflect the outcomes of the viewshed analysis of the Middle Yarra Concept Plan (1991), and are considered an important aspect of managing the Landscape Setting Corridor of the river in Banyule.
• The VPO1: Plenty River East Area, VPO3: Eaglemont, Ivanhoe East & Ivanhoe and VPO5: Substantial Tree Protection Area apply extensively to land beyond the extent of the ESO areas. The VPOs provide comprehensive protection of the tree canopy of the wider area, which forms the distant backdrop to the river environs.
• The Land Subject to Inundation Overlay requires permits for buildings and works on public and private land near the river, and limits development potential on these sites. Applications must be considered by Melbourne Water. The overlay does not relate to the management of river corridor landscape values.
• The Heritage Overlay manages the development of significant heritage places within the river corridor, but does not require consideration of landscape values, unless identified in a statement of significance.
Overview

This chapter provides an overview of the proposed form, content and spatial application of statutory planning controls for the Banyule Planning Scheme.

The proposed controls deliver a strengthened framework to achieve the agreed vision for the river and the protection of its values and character identified within the Middle Yarra River Corridor Study Recommendations Report, 2016. The focus of the new controls is to protect and enhance the natural landscape character of the Yarra River corridor where the river, its topography, adjacent public open space and a continuous corridor of vegetation and canopy trees remain the dominant features in public views from the Yarra River and its surrounds.

Recommended Changes

This study recommends the following changes to the Banyule Planning Scheme:

- Council to consider updating the Municipal Strategic Statement (MSS) to include content and outcomes outlined in this study as part of a future review of the Local Planning Policy Framework.
- Apply a new Design and Development Overlay (DDO) to areas of private land that are adjacent to, or within close proximity to, the Yarra River, establishing area specific height, setback and other siting and design requirements.
- Combine SLO ‘Watercourse Environments’ and SLO2 Yarra Valley Landscape Area into a single SLO control that takes in the confluence areas of the Darebin Creek and the Plenty River. The spatial application of the SLO should be extended to cover all land toward the Yarra River.
- Consider a master plan approach to managing major development sites and development on public land, using the Incorporated Plan Overlay (IPO) or the Development Plan Overlay (DPO), as a potential planning tool to guide the use and development of land.

The above recommendations are intended to improve the consistency of planning controls along the Yarra River between Richmond and Warrandyte. They reflect provisions and recommendations made for other municipalities along this stretch of the river.

Local Planning Policy Framework

It is recommended that Council strengthen existing references within the MSS regarding the Yarra River, utilising the content of the Middle Yarra River Corridor Study Recommendations Report, 2016.

An updated MSS could include the vision for the river set out in the Report, and the key values for the river corridor within Banyule that have been identified. The Middle Yarra River Corridor Study Recommendations Report, 2016, should also be included as a reference document.

Managing Built Form Outcomes – Applying the DDO

A new DDO schedule titled ‘Yarra River (Birrarung) Protection’ has been drafted for inclusion in the Banyule Planning Scheme based on the findings of the Recommendations Report.

An analysis of each DDO area which includes a detailed rationale for the control boundary, building heights and setbacks is provided in Appendix C.

DDO Boundary

The proposed DDO captures an area which best reflects the extent of land within the ‘Waterway Corridor’ and the ‘River Experience Corridor’ of the Yarra River, identified in Chapter 5 of the Report. This general area is defined as:

- the Yarra River itself, its banks and its immediate environment;
- the fore and middle ground landscape that is viewed or experienced from the river, the Main Yarra Trail and the adjoining parklands.

It is proposed that the new DDO be applied to identified areas of private land shown on the map on page 5 within this setting. The proposed DDO should be read in conjunction with the proposed SLO to ensure a holistic landscape management approach occurs. Appendix C provides more detail regarding the proposed extent of the control boundary for each area.

As a general rule, the DDO has not been applied to areas of public land as this study has not undertaken a detailed analysis of current and/or potential development opportunities to justify additional planning controls, particularly as other legislative controls also apply public land. In a limited number of situations, the proposed DDO has been applied to areas of public land for the following reasons:

- Where public land forms a narrow buffer between the Yarra River and private land;
- Where it helps clarify the spatial intent and application of the DDO; and
- Where ownership of land is in question and is zoned within a public zone.

Design Objectives & Decision Guidelines

The proposed design objectives and decision guidelines have been adapted from those outlined in Chapter 5 of the Report. The design objectives are structured under the following headings:

- Landscape protection
- Height, setback and overshadowing
- Materials and design
- Site coverage and permeability.

Permit Requirements

A permit is required for subdivision and all buildings and works within the proposed DDO. This includes the construction of a swimming pool or tennis court associated with a dwelling.

Overshadowing

It is proposed that a mandatory control be applied requiring that new buildings not cast any additional shadow over the banks and waters of the Yarra River, measured during the winter solstice.

In addition, overshadowing of public open space during spring/autumn equinox period is to be discouraged. Given the close proximity of private land to public open space it is recommended that this requirement be discretionary with any overshadowing assessed on merit, on a case by case basis.

Building Heights

A maximum mandatory building height is proposed for each identified area (see Appendix C). Within Banyule, the proposed height is set at 8m (with a 9m sloping site allowance) for all areas. This is consistent with the established pattern of 1-2 storey residential development within all character areas within Banyule and the underlying Neighbourhood Residential Zone, Low Density Residential Zone, and Rural Conservation Zone within the corridor.

Setbacks from the Yarra River

Area-specific mandatory setbacks have been recommended, (see Appendix C), assessed against the methodology outlined in Chapter 5 of the Report.

Setback maps are included as attachments to the DDO schedule to provide direction on the location of the ‘Setback Reference Line’ that is to be used for determining horizontal setback measurements.

In all instances the ‘setback reference line’ relates to a cadastral/property boundary for ease of identification. Information showing the setback line on the DDO schedule map is for illustrative purposes.

Within Banyule setbacks vary between 30m and 100m from the Yarra River. For a number of areas it is proposed that an elevation contour level be used to define a more naturalistic setback. All setbacks are outlined in Table 1 of the proposed DDO.

Existing development within a setback

Where existing buildings are located within a mandatory setback distance it is proposed that the following mandatory conditions apply in relation to any application to partially or completely replace the building:

- the proposed height is consistent with the height specified for the area;
- the proposed replacement does not reduce the existing setback of the previous building; and
- the footprint of the building is limited to the current gross floor area.

The proposed control provides discretion to the Responsible Authority should a re-orientation of the building footprint occur, to encourage an increased setback to be achieved and a better outcome from a visual impact perspective.

Fences

A permit is required to construct a fence within identified setbacks areas. An exemption is provided for simple rural post and wire, and timber rail type fencing.

Where a permit is required, key considerations should include that the height of the fence, the visual permeability and use of materials do not contrast with the local environment. These requirements aim to ensure any proposed fencing does not have a negative visual impact on the overall local landscape character.

Site Coverage

It is proposed that a site area provision be included to limit built form and hard stand areas within a lot in a residential area as a discretionary requirement. This is to ensure that:

- the bulk and massing of built form or a hard stand area does not dominate the visual appearance of the site context;
- stormwater run off is reduced; and
- retention and expansion of vegetated areas is encouraged.

Building Materials

Materials selection is a key component and objective of the DDO. A discretionary requirement is included to ensure building materials utilise non-reflective colours and finishes to avoid visual intrusion with the context of the surrounding landscape. This requirement is discretionary given the variety of building products which are available, and the variable landscape characteristics of a given locality.
Subdivision
Appropriate consideration will need to be given to the potential impact future development associated with a subdivision may create from the perspective of the Yarra River environs. While this study has not recommended minimum subdivision lot sizes, this option could be investigated further by Council within the context of broader strategic land use planning objectives for areas adjacent to the Yarra River.

Application Requirements
It is proposed that applications be accompanied by key information which will assist the Responsible Authority in making an informed assessment of a proposal. Information that should be provided for an application will be based on the type of buildings and works proposed, at the discretion of the Responsible Authority. This may include:

- A written assessment demonstrating how the proposal meets the objectives and requirements of the DDO.
- A survey plan, prepared and certified by a suitably qualified surveyor, accurately showing proposed buildings and works in relation to proposed mandatory height and setbacks, measured to Australian Height Datum and from natural ground level.
- A visual impact assessment which may comprise cross-sectional diagrams, photo montages or a view shed analysis from agreed publicly accessible viewing points.
- The need for shadow diagrams and a schedule of materials and finishes.

Referral of Applications
It is recommended that referral of applications within 50 to 100 metres of the banks of the Yarra River be referred to Melbourne Water on a recommending referral basis. Referral should be focused on Melbourne Water’s review of the potential impact that a development may have on the health and function of the riverine environment, in addition to any potential flood constraints that may be present where a corresponding referral under a flood overlay exists. For example, this could include:

- Assessment of the removal of riparian, or other vegetation, and its impacts on bank stability or erosion.
- Impacts of direct or indirect run on riverine environment, excavation or other earthworks which may impact.
- An amendment to clause 66.04 of the planning scheme will be required to give effect to this.

Reference Document
The Middle Yarra River Corridor Study Recommendations Report, 2016, Department of Environment, Land, Water and Planning, should be identified as a reference document.

Managing Landscape, Vegetation & Environmental Values - Applying the SLO
The Middle Yarra River Corridor Study Recommendations Report, 2016, identifies the need for a consistent approach to the management of vegetation and environmental values which contribute to the overall landscape significance of the entire corridor.

It is proposed to combine SLO1 Watercourse Environments’ and SLO2 Yarra Valley Landscape Area into a single SLO control that takes in the confluence areas of the Darebin Creek and the Plenty River. The spatial application of the SLO should be extended to cover all land toward the Yarra River.

New SLO Schedule titled ‘Yarra River (Birrarung) Corridor’ has been drafted for inclusion in the Banyule Planning Scheme, based on the findings of the Report.

The proposed SLO should be read in conjunction with the proposed DDO to ensure a holistic landscape management approach occurs where overlap exists.

SLO Boundary
The proposed SLO captures an area which includes the ‘Waterway Corridor’ and the ‘River Experience Corridor’, as described in Chapter 5 of the Recommendations Report. In some locations, the SLO will also include land within the ‘Landscape Setting Corridor’, comprising the wider river valley, due to the topographic influences affecting the vewshed from the river, its adjoining open spaces or the Main Yarra Trail.

The SLO applies to all areas of public and private land as shown on the map on page 10 mapped to the centreline of the Yarra River.

The existing spatial extent of SLO1 should be maintained. It is proposed that the SLO be extended to apply to all areas to the south and east to the centreline of the Yarra River.

The above will assist to complement current application of ESO1 ‘Yarra River, Plenty River & Darebin Creek’ with its strong and consistent approach to matters of environmental significance.

Statement of Nature and Key Elements of Landscape
The proposed SLO schedule includes a statement which outlines the significance of the Yarra River at the State, regional and local level, structured in the following way to include:

- A statement outlining the importance of the Yarra River at a ‘whole of river’ perspective;
- The landscape, environmental, cultural and social value of the Yarra River;
- An overview of the landscape values relevant to the SLO area within the Banyule Shire.

Landscape Character Objectives & Decision Guidelines
The objectives of the draft SLO are adapted from those outlined within Chapter 5 of the Recommendations Report. The objectives are structured under four key themes with the following general objectives:

- Landscape and environmental values
- Protection of waterway and the riparian zone
- Public open space and access
- Siting and design of built form

Permit Requirements
It is proposed that a permit be required in the following instances:

- Removal, destroy or lop vegetation with an exemption for vegetation which is not a protected species;
- Siting and design of built form.
- A permit will be required for all activities which are not identified within the SLO schedule for which a permit is required.
- Undertake buildings and works associated with a bicycle or shared pathway with appropriate exemptions for municipal or public authorities.

As the application of the SLO will affect both private and public land, it is proposed that an exemption be included for municipal and or public authorities who may be conducting roadway, stream or other types of works which are aimed at ensuring the ongoing health of the waterway environment.

Application Requirements
It is proposed that applications be accompanied by key information which will assist the Responsible Authority in making an informed assessment of a proposal.

Information that should be provided for an application will be based on the type of buildings and works proposed, and at the discretion of the Responsible Authority. This may include:

- A written assessment demonstrating how the proposal meets the objectives and requirements of the SLO.
- A survey plan, prepared and certified by a suitably qualified surveyor accurately showing the location of proposed buildings and works measured to Australian Height Datum from natural ground level.
- A landscape plan which outlines the location, species type and quantity of vegetation to be removed, and any replacement vegetation, supported by a suitably qualified arborist report.
- How any earthworks and their impacts will be managed and what protections are to be provided regarding run off or to prevent erosion when close to the river’s bank.

Referral of Applications
It is not proposed that any formal referral arrangements be established under this SLO. Notification of an application of any interested party can occur at the discretion of the Responsible Authority.
