Demographics of ageing

Presentation to Plan Melbourne Working Group on Residential Aged Care Facilities,

Fiona McKenzie, Principal Researcher, DELWP

9 October 2017

The ageing trend

- Increasing survival
 - In 2012 more than 90% of our population were living past age 60
 - In the late 19th century less than 50% did
- Declining fertility
 - Average number of children per woman declined rapidly after 1971
 - Victoria has been below 'replacement' level fertility since the mid-1970s
 - Children now form a smaller % of our population than in the past
- Increasing numbers of older people ...

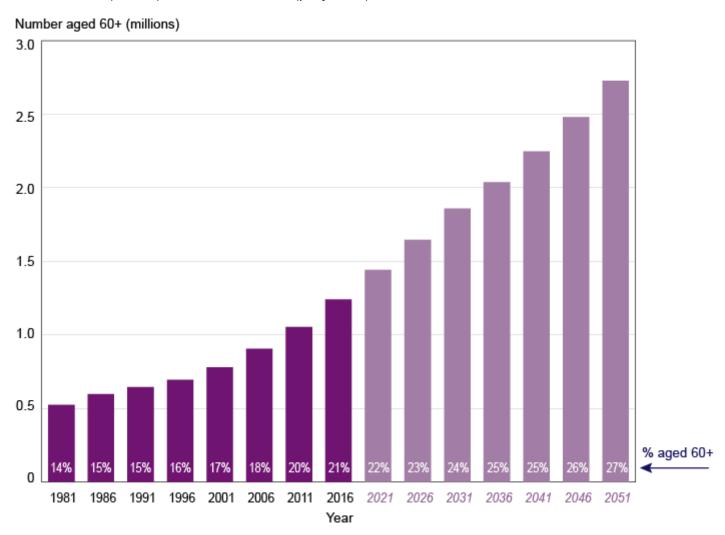

Ageing

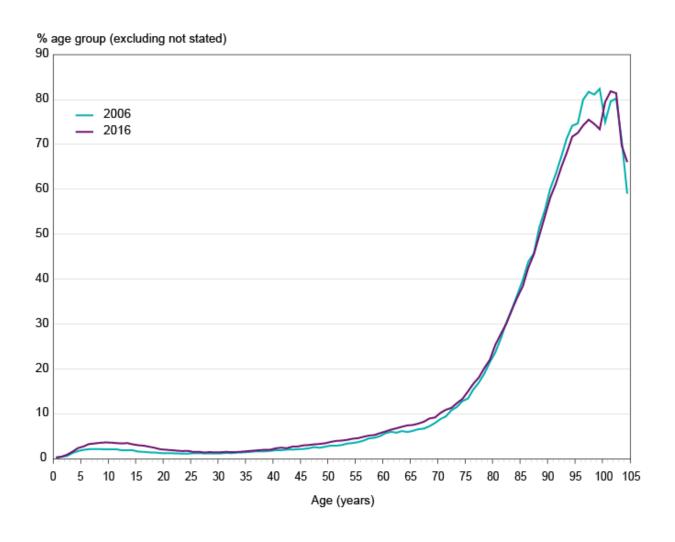

Number and proportion of Victorians aged 60 years and over

1981 to 2016 (actual) and 2021 to 2051 (projected)

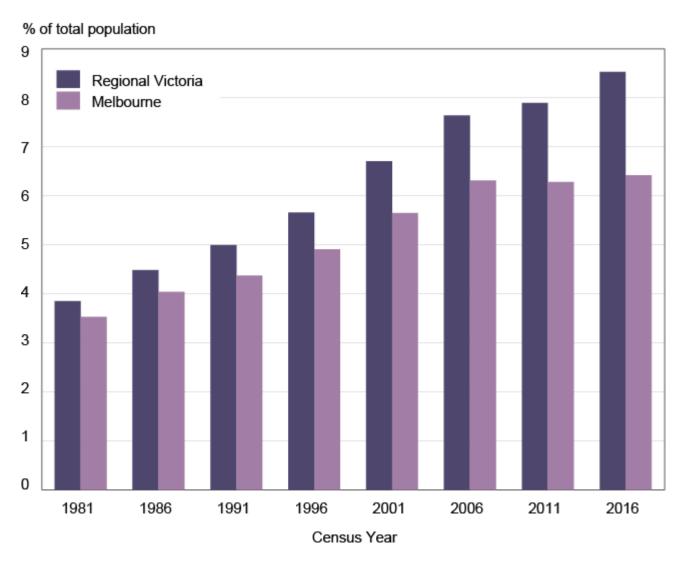

Need for assistance by age

Victoria 2006 and 2016

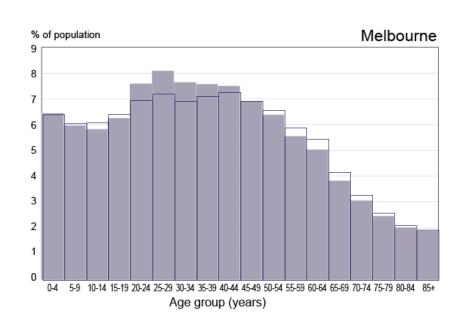

Structural ageing

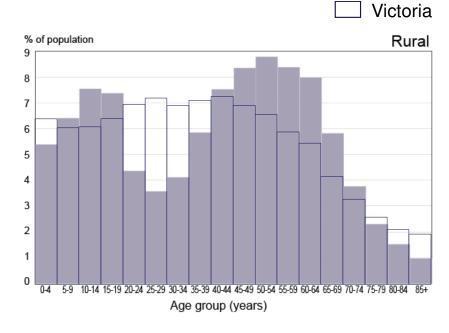

Proportion of population aged 75 years and over, Melbourne and Regional Victoria, 1981 to 2016

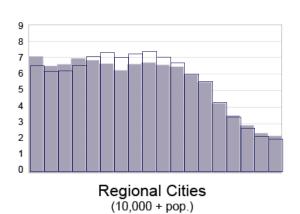

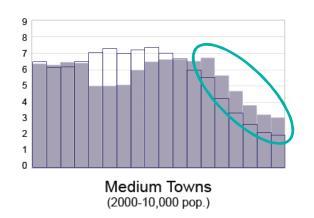

Source: SAR unpublished time-series database 1981-2001 based on enumerated census data; ABS census 2016 LGA time-series profile based on usual residence

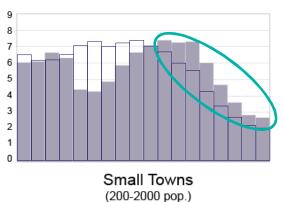

Population structure – variation over space

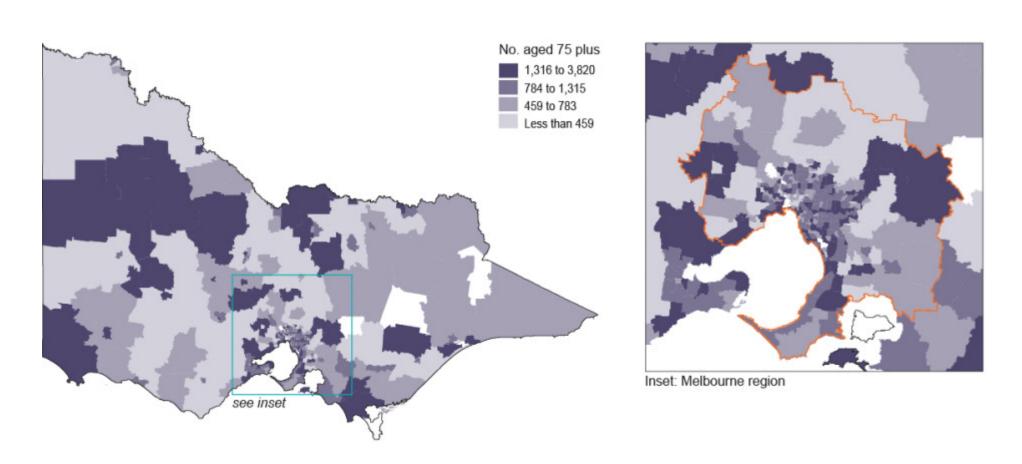

Source: ABS Census 2011

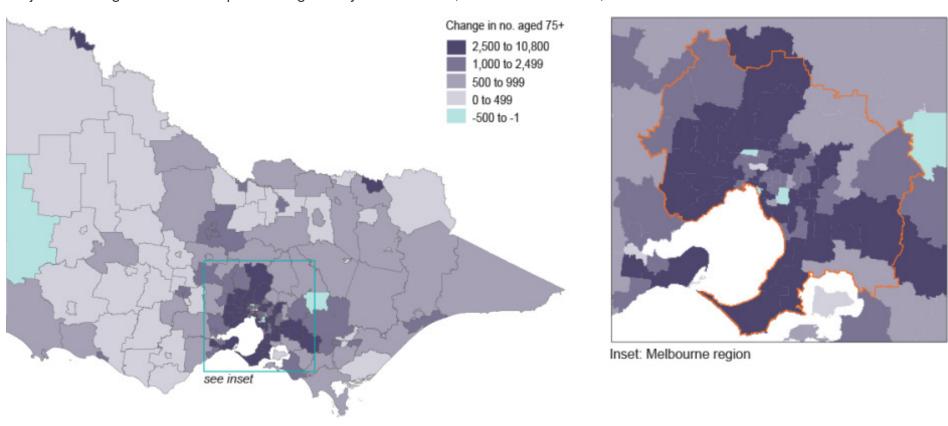

Numbers aged 75 years and over 2016

Statistical Area Level 2 (SA2), place of usual residence

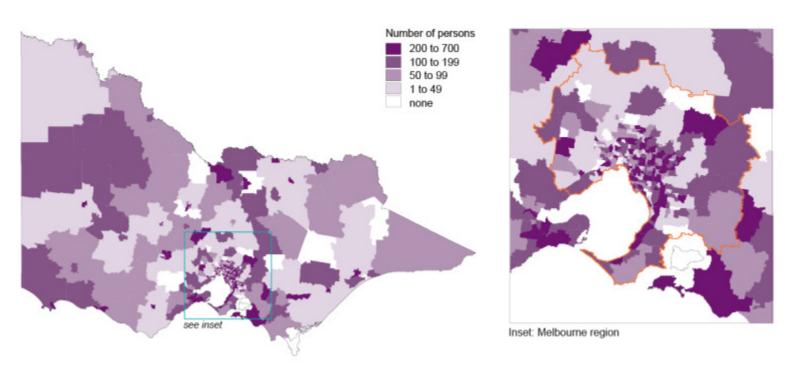

Areas with projected increase in 75+ year olds

Projected change in number of persons aged 75 years and over, VIF Statistical Area, 2016 to 2031

Policy considerations and challenges

- Demographics are dynamic ageing in outer suburbia and peri urban, but renewal of young populations in central areas
- Do people move to the service or service move to people? Will inner urban demand for aged care increase in the future?
- Costs of provision and cost of purchase. What impacts of affordability?
- Low density / low population areas of the state? How to service?
- Populations are increasingly mobile. How flexible is our provision of aged services?

Persons aged 70+ living in non-private dwellings, SA2, 2016.
