Comments: Wurundjeri Way Extension is proposed to be an elevated roadway and appears to not have any noise walls - I live adjacent this proposed roadway and expect to be severely impacted by noise, odour and dust impacts both during construction and operation of the roadway - the visual impact of this elevated roadway is also of concern - noise walls that were installed along the north side of the railway easement as part of the Regional Rail upgrade are for rail impacts only and as such they cannot be relied upon to act as noise mitigation for this elevated roadway - as a resident I expect the noise modelling to consider the fact that I live in a multi-storey residence with the living and bedrooms on the top floors and as such any noise modelling should not only consider ground floor dwellings
