# 1.0 INTRODUCTION

1.1.1 This report was prepared for Jacobs in January 2024 to provide an assessment of trees located to the perimeter of Silvan Reservoir, Silvan, to assist in planning and design of the Silvan Reservoir Fence Project.

## 1.2 STUDY AREA

1.2.1 The study area comprises a 5-metre buffer to each side (10 metre total width) of the existing perimeter fence of Silvan Reservoir, a linear portion of land approximately 16 kilometres in length. The study area is shown at Figure 1.

FIGURE 1 STUDY AREA

## 1.3 METHODOLOGY

1.3.1 This assessment is generally limited to trees as defined in AS4970-2009 *Protection of trees on development sites* – “Long lived woody perennial plant greater than (or usually greater than) 3m in height with one or relatively few main stems or trunks”.

1.3.2 All trees within the 5 metre buffer to each side of the existing boundary fence were assessed, as well as any other trees outside the buffer area with branches that extend over the fence line to a height of 6 metres or less (Figure 2).

**FIGURE 2 TREE 1153, A MANNA GUM, LOCATED MORE THAN 5 METRES FROM THE FENCE BUT WITH LOW BRANCHES EXTENDING OVER THE FENCELINE**

1.3.3 A ground-based visual assessment was undertaken for each tree identified on survey mapping provided by Jacobs. The following data were collected for each tree:

- Taxon and Common Name;
- Height and width, measured with a laser rangefinder;
- Diameter at breast height (DBH) measured or estimated, estimated diameter at base (DAB);
- Age class;
- Health, structure and overall form;
- Useful life expectancy (ULE);
- Arboricultural rating.

1.3.4 Trees were assessed in November and December 2023.

## 2.0 SUBJECT TREES

### 2.1 OVERVIEW

2.1.1 Two thousand one hundred and nineteen trees have been assessed as part of this study, with the majority, 1795 trees, being locally indigenous taxa. The most frequently encountered species is Messmate (*Eucalyptus obliqua*), within 969 trees assessed, followed by Narrow-leaved Peppermint (*E. radiata*), 493 trees, Silver Wattle (*Acacia dealbata*) 146 trees, and Blackwood (*A. melanoxylon*), 103 trees. An overview of the origin of assessed trees is shown at Figure 3, with the ten most encountered taxa listed at Table 2-1.

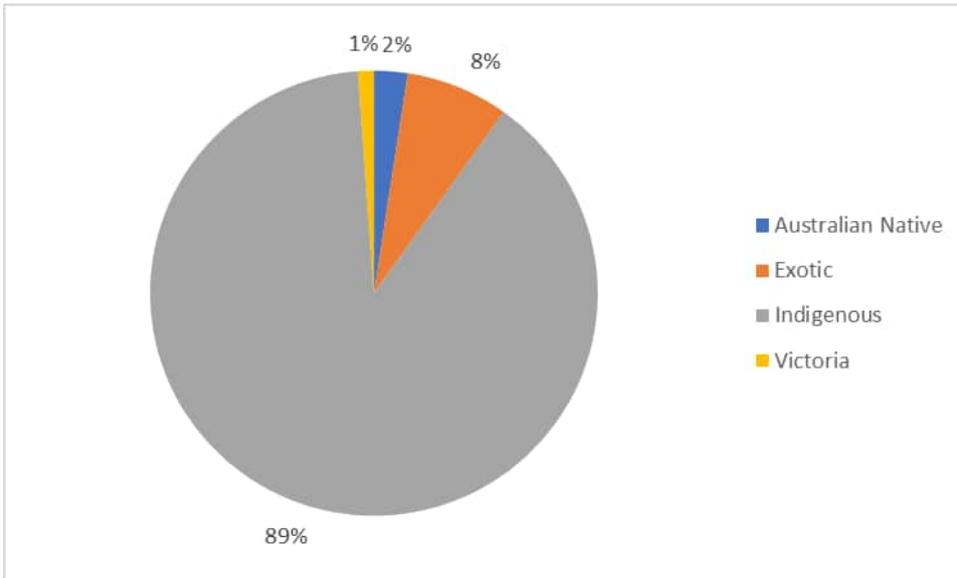

FIGURE 3 OVERVIEW OF ORIGIN OF ASSESSED TREES

TABLE 2-1 TEN MOST ENCOUNTERED TREE TAXA WITHIN THE STUDY AREA

Taxon	Common Name	Origin	No. trees
<i>Eucalyptus obliqua</i>	Messmate Stringybark	Indigenous	969
<i>Eucalyptus radiata</i>	Narrow-leaved Peppermint	Indigenous	493
<i>Acacia dealbata</i>	Silver Wattle	Indigenous	146
<i>Acacia melanoxylon</i>	Blackwood	Indigenous	103
<i>Acacia elata</i>	Cedar Wattle	Australian Native	36
<i>Acer pseudoplatanus</i>	Sycamore Maple	Exotic	32
<i>Pinus radiata</i>	Monterey Pine	Exotic	23
<i>Eucalyptus cypellocarpa</i>	Mountain Grey Gum	Indigenous	18
<i>Unknown sp.</i>	Unknown dead trees	Exotic	17
<i>Acacia floribunda</i>	Catkin Wattle	Victoria	16

## 2.2 ARBORICULTURAL VALUE

2.2.1 Trees have been categorised on their arboricultural value, to provide:

- A summary of the overall significance of each tree based on its overall size, condition and contribution to the landscape
- A guideline for decision making about tree retention or removal within the study area
- A method to identify potential risks in tree removal, where higher value trees are likely to be held in greater importance to the local community.

2.2.2 Trees have been categorised as High, Moderate, Low and No arboricultural value.

2.2.3 **High.** Three hundred and eighty-five trees have been assessed of high arboricultural value. These comprise trees of mature proportions that are prominent specimens within the broader landscape, and which are viable at least into the medium term (11-20 years), although most trees in this category, 370 specimens, have assessed useful life expectancies (ULEs) of more than 20 years.

2.2.4 **Moderate.** Six hundred and eighty-four trees have been assessed of moderate arboricultural value. These comprise :

- trees yet to achieve fully mature proportions but are well established, contribute to broader landscape character and have assessed useful life expectancies (ULEs) of more than twenty years
- trees of mature proportions with reduced health or structural ratings that limit their long-term viability within the landscape.

2.2.5 **Low.** Six hundred and thirty-two trees have been assessed of low arboricultural value, comprising trees of limited scale and individual contribution to landscape character, larger trees exhibiting reduced health and/or structural ratings that limit their ULE and species with a propensity to weediness.

2.2.6 **None.** The three hundred and eighteen trees assessed of no arboricultural value include dead specimens, trees in overall poor condition with ULEs of less than 5 years and identifiably self-sown weeds.

2.2.7 A summary of the arboricultural value of trees assessed as part of this study, categorised by taxon, is listed in Table 2-1, below.

TABLE 2-2 SUMMARY ARBORICULTURAL VALUE OF ASSESSED TREES

2.2.8 Tree assessment data is included at Section 3.0, with tree locations shown on the plans at Section 5.0, overlaid over the proposed development plan.

## 2.3 PLANNING CONTROLS

2.3.1 The following environment and landscape overlays apply to trees and vegetation as part of the Yarra Ranges Planning Scheme. Assessments against clause 52.17 Native Vegetation of the planning scheme are included in the ecology assessment prepared for this project.

2.3.2 **Schedule 1 to the Environmental Significance Overlay (ESO1).** ESO1 applies to most of the study area except for several sections of the Monbulk Road road reserve, including at the intersections of Stonyford Road and McCarthy Road in the north east and south east respectively, and a section of the boundary of RJ Hamer Arboretum in the south west of the study area.

2.3.3 Under the provisions of ESO1, a permit is not required for the removal, destruction or lopping of:

- exotic vegetation, which for the purposes of this assessment is assumed to mean non-native vegetation,
- vegetation listed in the *Yarra Ranges Council – List of Environmental Weeds, 2019*.
- dead (native) standing trees with a trunk circumference of more than 1.3 metres (40cm diameter) measured at a height of 1.3 metres above ground level.

- 2.3.4 **Schedule 1 to the Significant Landscape Overlay (SLO1).** SLO1 applies to most of the study area except for the easternmost section of the Stonyford Road road reserve, and a 620 metre section of Monbulk Road south of the intersection of Stonyford Road.
- 2.3.5 Under the provision of SLO1, a permit is required to remove, destroy or lop:
- native vegetation that occurs naturally in the Shire of Yarra Ranges
  - a substantial tree with a trunk circumference greater than 1.1 metres (0.35 metre diameter) at a height of 1.3 metres above the ground.
- 2.3.6 These provisions do not apply to the removal of vegetation that is dead or to the removal of vegetation that is one of the species listed in the Incorporated Document *Yarra Ranges Council - List of Environmental Weeds 2019*.
- 2.3.7 The status of each tree assessed as part of this study under both ESO1 and SLO1 is included in the detailed tree assessment data at Section 3.0.
